## GENETIC TESTING OF MISSED ABORTION MATERIAL

Help your patients find the cause of miscarriage and to develop a strategy for successful conceiving and carrying of planned pregnancy

A complex analysis of all foetal chromosomes using NGS method (Next generation sequencing) helps identify unbalanced chromosomal changes in 1-22 pairs of autosomes and in the X, Y sex chromosomes and get a clear answer to the question, whether the cause of an interrupted pregnancy are foetal chromosomal abnormalities

**Identification of Genetic Abnormalities - Risk Assessment for Future Pregnancies - Emotional Healing and courage to continue**

**Geneticist consultation with detailed explanation**

## INSTRUCTION

### **Genetic testing of missed abortion material**

*(up to the 12th week of pregnancy)*

#### **For patient:**

The material of the aborted pregnancy (chorion or foetus) must be collected. The material can be placed in a clean, resealable container and covered with physiological solution

The material may be stored in the refrigerator for up to 3 days until delivery to the clinic. If the physiological solution is not available, then the material can be stored in a refrigerator without additional liquid or in clean water for up to 12 hours, or in a freezer without additional liquid for a longer period, until delivery to clinic

In addition, a maternal blood sample in an EDTA tube is required

#### **For doctor:**

If the material is taken by the doctor, then there are no exact instructions on how to perform the procedure correctly - all the material is taken, and everything is examined in the laboratory to find foetal material. Please take into account and immediately inform the patient that there are cases when the foetal material is not found - this is rare, but it does happen in practice. To ensure the test results, please deliver all the collected material to us

In addition, a maternal blood sample in an EDTA tube is required

**Test price - 330.00 EUR. If the foetal material is not found, the payment is returned, deducting 21.00 EUR for processing the material**
